

Slack for financial services

A better way to collaborate.

Slack is uniquely suited to respond to the challenges of fast-moving, regulated industries, from ensuring that mobile devices and data are kept secure to helping resolve fraud incidents faster. Our industry-leading security program is designed to support digital transformation across all business units, not just the technical ones.

Slack also easily integrates with systems across different sectors of your business, streamlining work and boosting efficiency.

KEY BENEFITS

Enterprise-grade security

Slack allows financial services organizations to accelerate digital transformation and innovation while still meeting specific industry regulations and data privacy standards, including FINRA, data residency and GDPR. Slack's security program offers full mobile device management (MDM), as well as native mobile security features that allow you to achieve mobile security that works with your business and risk models.

A new way to collaborate with colleagues, partners and customers

Slack helps the right experts—whether internal or external—to come together quickly in Slack channels, where they can do everything from discussing firmwide topics to improving time-to-resolution for critical fraud incidents. Shared channels in Slack make it seamless to collaborate with outside partners and clients, leading to less friction, more innovation and faster decision-making.

Radically simplified business operations

The Slack platform integrates with more than 1,000 apps, which means all of your work can be centralized in one place—and you'll spend less time switching between software products. For developers building the future best digital banking experiences, Slack provides tools and features that power custom app development to digitally transform key processes.
